DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, 10-19, 26-36, 41-45, 50-53, 56, and 57, drawn to methods of identifying therapeutic compounds, classified in class 205, subclass 775.
 - II. Claims 9, 20-25, 37-40, 46-49, 54, 55, and 58, drawn to therapeutic compounds, classified in class 424, subclass 9.2.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the compositions could have been discovered by other prior art assays. MPEP 2113 stipulates that product claims are not limited to manipulations of the recited steps of the process preceding it, but only by the structure implied by the process steps. Because none of the steps preceding these composition claims imply any structure to the composition (i.e. the process steps merely tested the already inherent structure of the composition), the composition claims are in no way further limited by the processes that precede them and could have been arrived at by other identification schemes.
- 3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the

Application/Control Number: 10/696,752

Art Unit: 1753

inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Applicant also has species drawn to different disorders to be treated. Species A, oxidative stress (claims 9-40 and 50-58) and species B, amyloid-β fibril formation (claims 41-49). Should applicant elect species A, applicant must elect from the following subspecies: species Aa, inflammation (claims 9-39 and 50-58); species Ab, neurodegeneration (claims 9-28, 30, 31, 33-40, and 50-58); and species Ac, ischemia (claims 9-28, 30, 31, 33-40, and 50-58). The species are independent or distinct because these different groupings are drawn to different disorders to be treated.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-8 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

5. No telephone call was made due to the complexity of the restriction requirement (see MPEP 812.01).

Art Unit: 1753

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kaj Olsen whose telephone number is (571) 272-1344. The examiner can normally be reached on Monday through Friday from 8:00 A.M. to 4:30 P.M..

Application/Control Number: 10/696,752

Art Unit: 1753

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen, can be reached on 571-272-1342. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
